Devs+502
Presenta

AFest

2018

Occidente

Regístrate en el Evento

Plan Premium

Q100.00

Keynote, Charlas, Codelabs
Certificado de Participación + T-shirt
Válido hasta el 1 de julio

Plan Standard

GRATIS

Keynote, Charlas, Codelabs

Para registrarte utiliza el siguiente link <http://bit.ly/2keW8LW>

  @AFestPlus502  <https://afest.plus502.com>

Occidente, julio 7
7:30 a 18:00
Universidad Mesoamericana,
(3ra calle 14-03 y 14-36
zona 3, Quetzaltenango)

¿Qué es Android?

Android

- Sistema Operativo Basado en el Kernel de Linux
- Es un sistema Linux Multi-usuario
(Cada aplicación es un usuario diferente)
- Cada aplicación tiene su propio “Equipo Virtual”
(Cada aplicación se ejecuta de forma independiente a las otras)

¿Qué lenguaje utilizamos para
programar Android?

Apps Android no son Apps Java

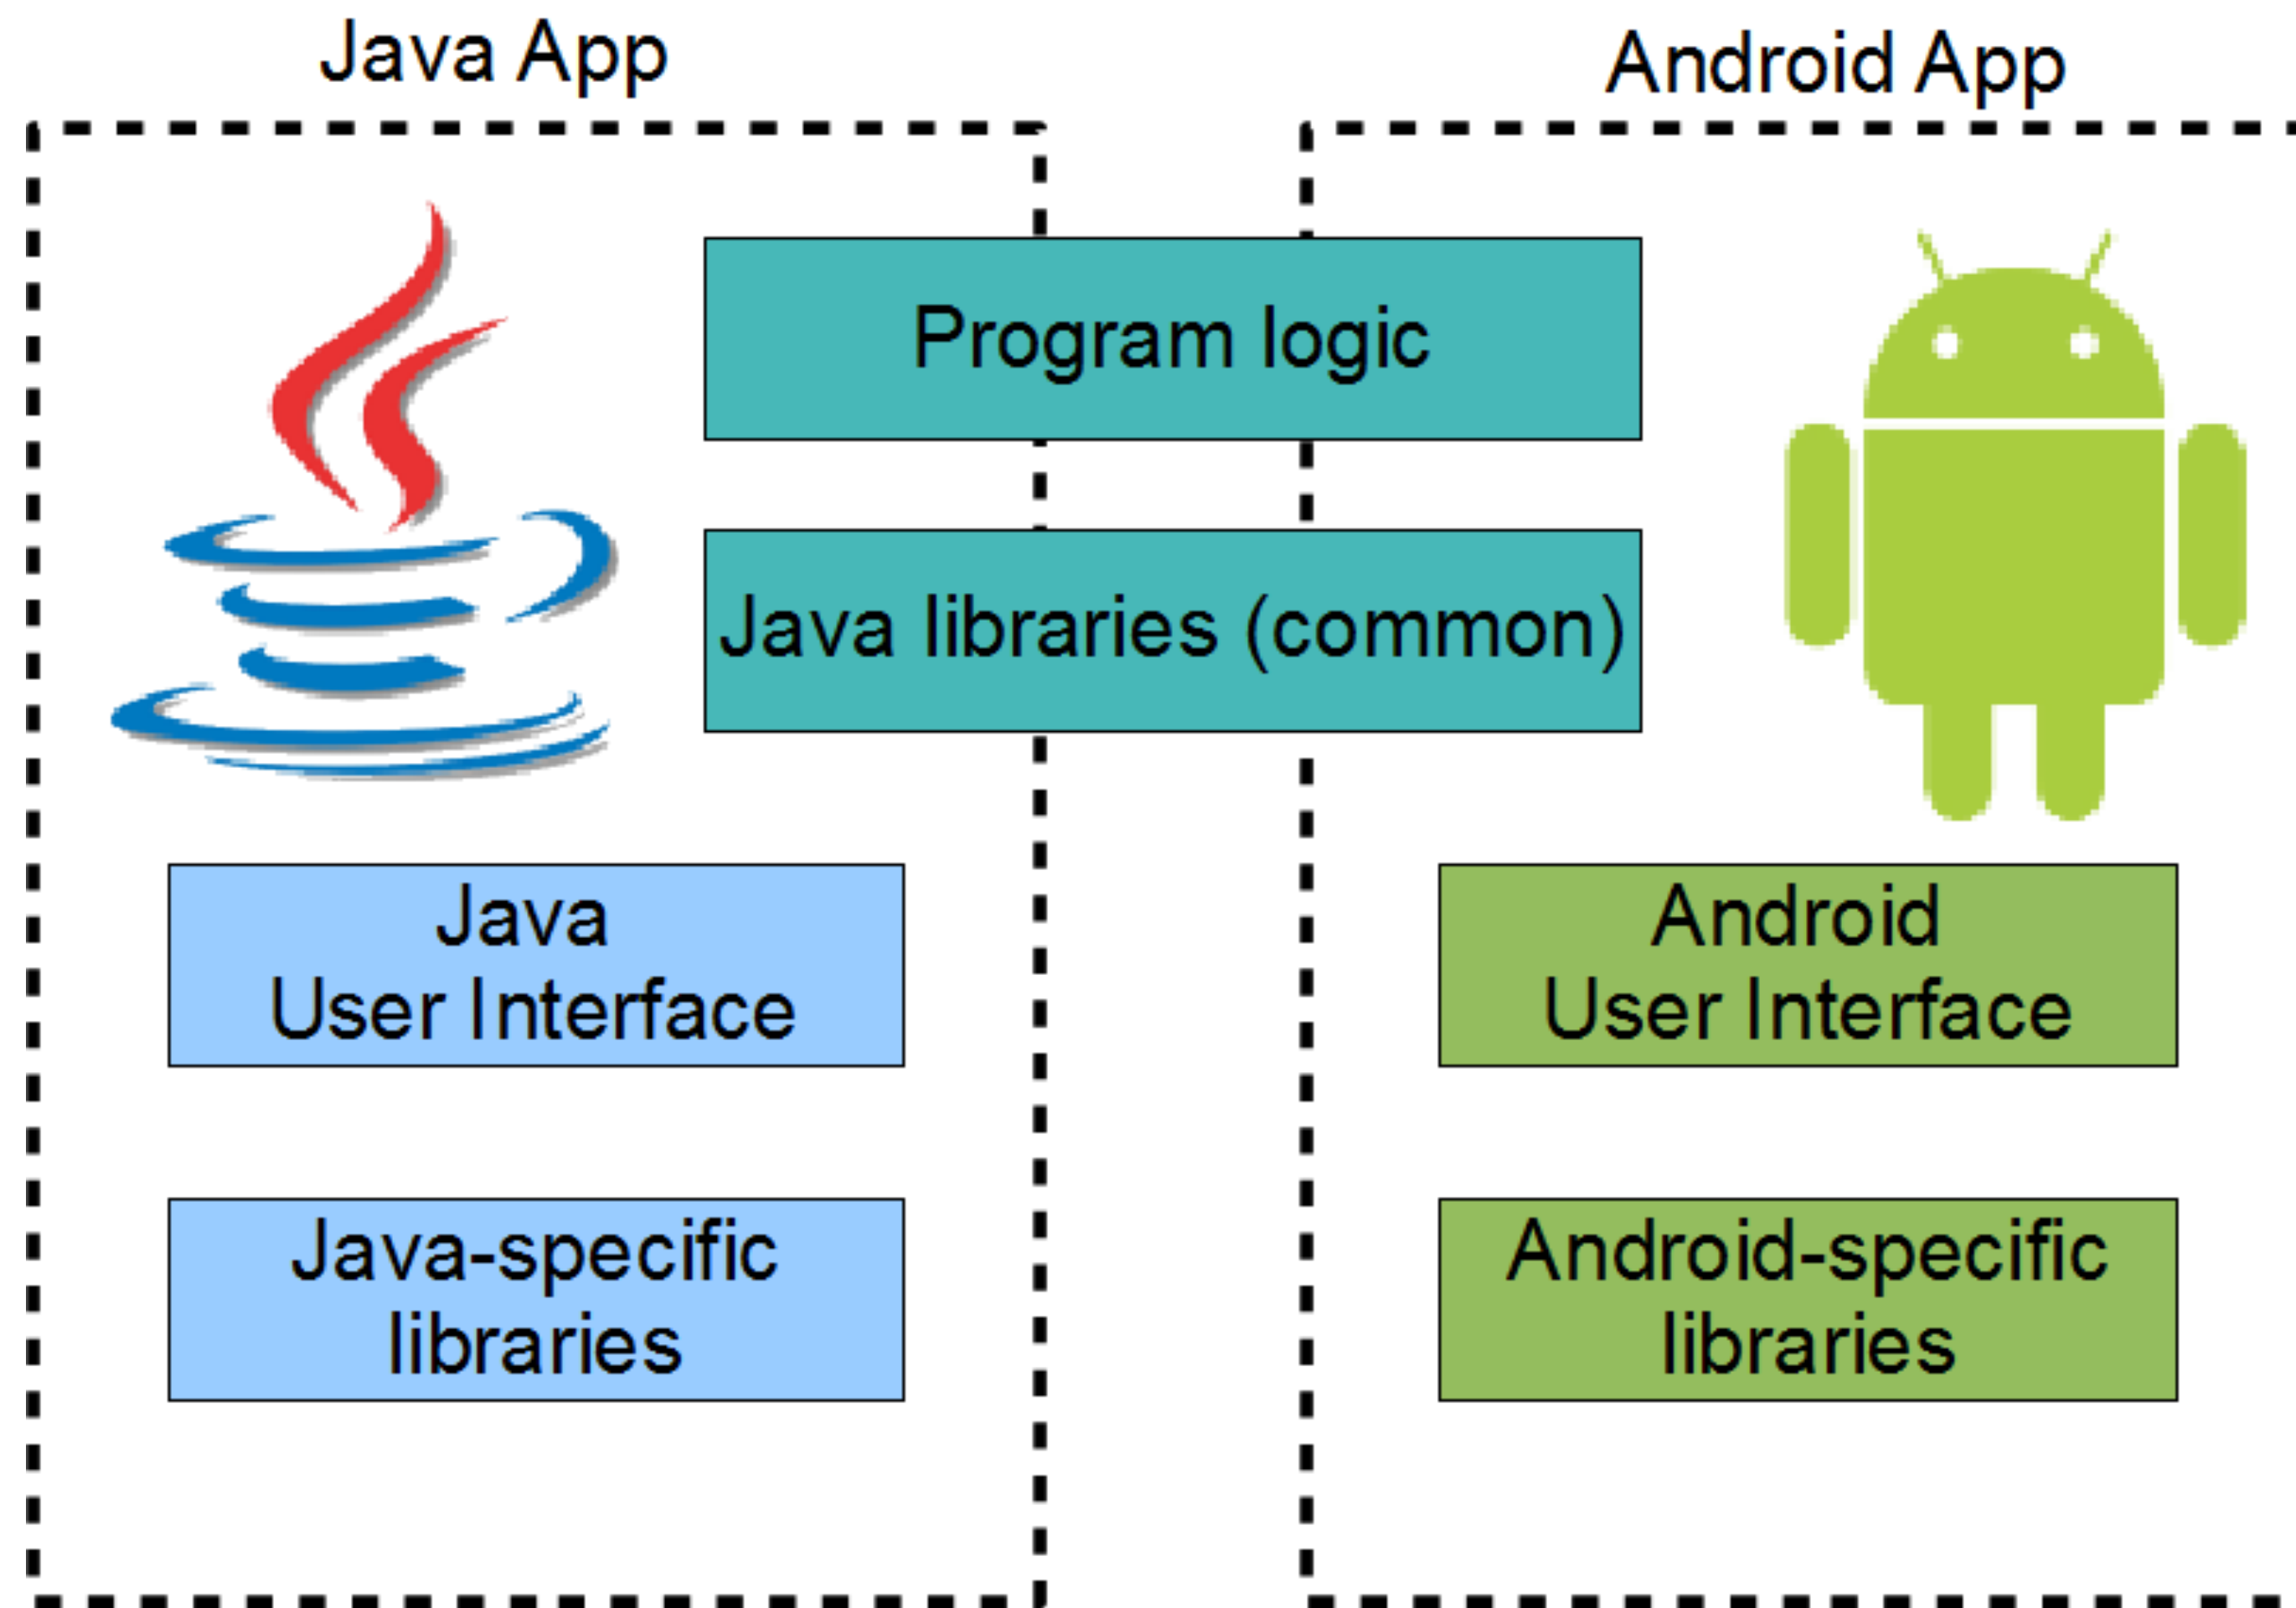

Image from <https://www.extremetech.com/>

Dalvik & ART

No Standard Java Virtual Machines

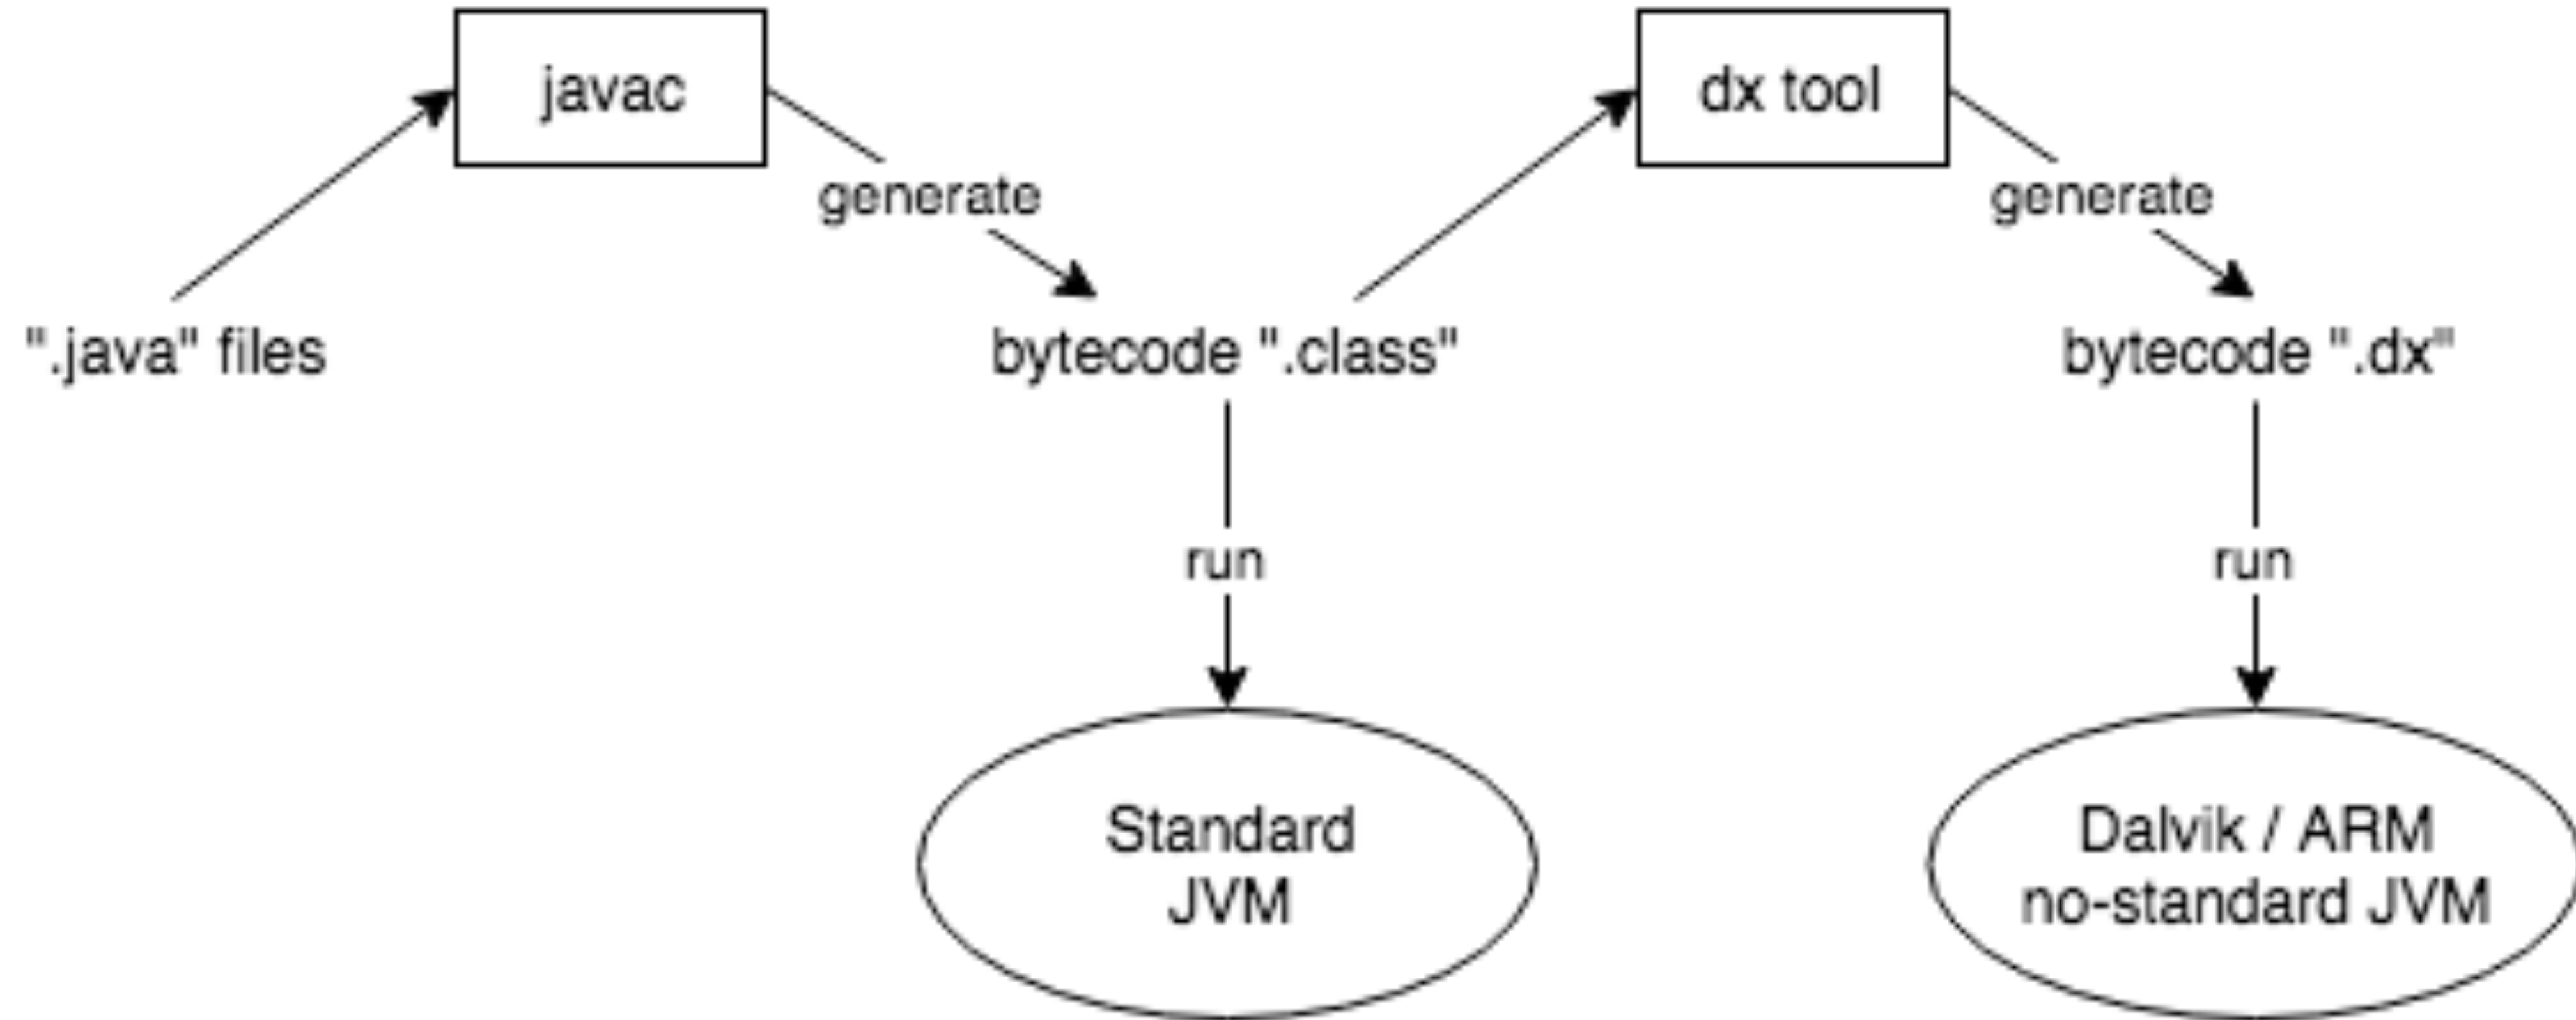

x Dalvik & ART

we run .dx files and not .class ones

dx tool

¿Qué versión de Java utiliza Android?

JavaSE6 JavaSE7 JavaSE8

¿Qué distribución de Java
utiliza Android

Apache Harmony™

Apache Harmony™

- Open Source version of Java developed by the Apache Software Foundation
- 99% of compatibility with Java SE 5
- 97% of compatibility with Java SE 6
- The project was discontinued on November 2011

¿Cómo podemos utilizar JavaSE7?

Magia Oscura

Google Transforma JavaSE7 en JavaSE8

¿Cómo logra Google hacer que
Android sea Compatible con JavaSE8?

OpenJDK

ANDROID

Cupcake
Android 1.5

Donut
Android 1.6

Eclair
Android 2.0/2.1

Froyo
Android 2.2.x

Gingerbread
Android 2.3.x

Honeycomb
Android 3.x

Ice Cream Sandwich
Android 4.0.x

Jelly Bean
Android 4.1.x

KitKat
Android 4.4.x

Lollipop
Android 5.0

Marshmallow
android 6.0

Nougat
android 7.0 ×

Los Features de JavaSE8 suelen ser
compatibles solo con Android 7 -
Nougat Lanzado en el 2016

Fragmentación

Una barrera entre la innovación y el desarrollo

Kotlin

#io17

Fundamentos de Programación en Android

• App Fundamentals

- App Components
- Manifest File
- App Resources

• App Components

- Activities
- Services
- Broadcast receivers
- Content providers

Manifest - Declaring Components

```
<?xml version="1.0" encoding="utf-8"?>
<manifest ... >
    <application android:icon="@drawable/app_icon.png" ... >
        <activity android:name="com.example.project.ExampleActivity"
            android:label="@string/example_label" ... >
        </activity>
        ...
    </application>
</manifest>
```

Declaring Components Capabilities

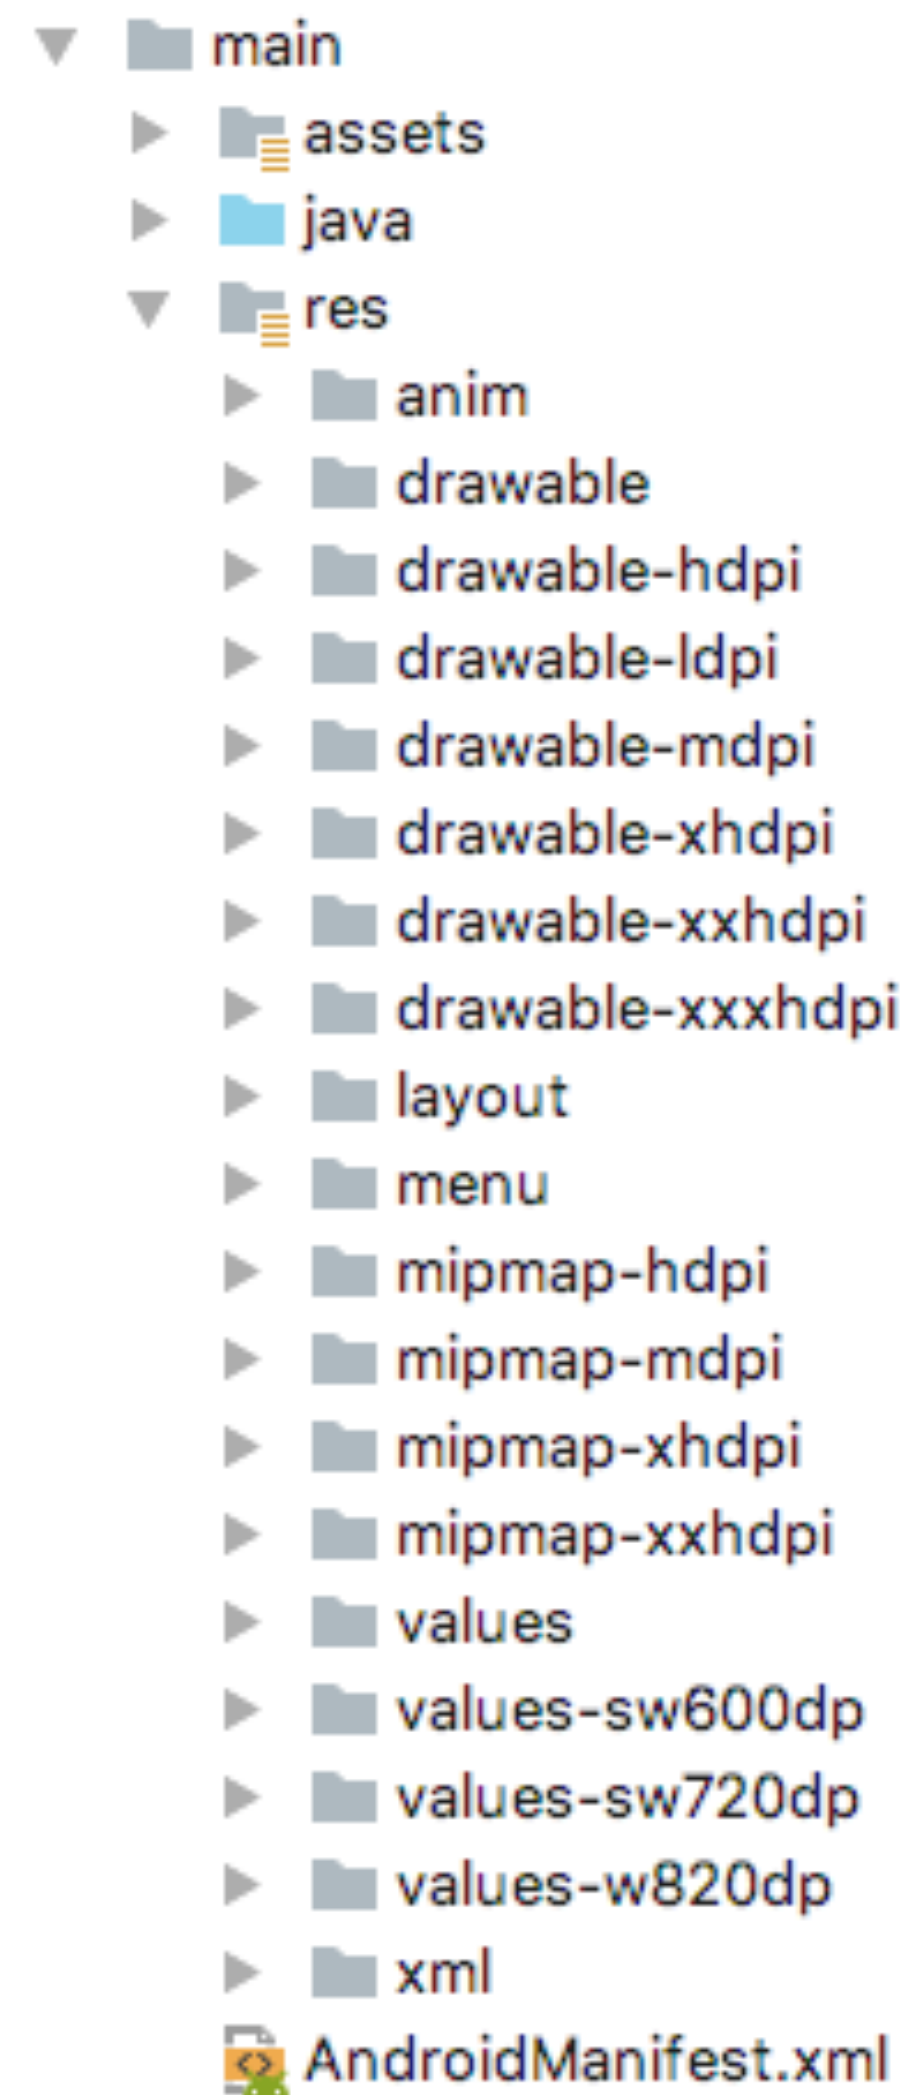

```
<manifest ... >
    ...
    <application ... >
        <activity android:name="com.example.project.ComposeEmailActivity">
            <intent-filter>
                <action android:name="android.intent.action.SEND" />
                <data android:type="*/*" />
                <category android:name="android.intent.category.DEFAULT" />
            </intent-filter>
        </activity>
    </application>
</manifest>
```

Declaring App Requirements

```
<manifest ... >  
    <uses-feature android:name="android.hardware.camera.any"  
        android:required="true" />  
    <uses-sdk android:minSdkVersion="7" android:targetSdkVersion="19" />  
    ...  
</manifest>
```

App Resources

Kotlin

• Lambda Calculus

This is a Function

$$\text{squareSum}(x, y) = x^2 + y^2$$

This is a Lambda

$$(x, y) \longrightarrow x^2 + y^2$$

ORACLE®
Developer
Champion

Lambda Expression Structure

Parameter(s) \rightarrow Body

• Lambda Calculus

$a \rightarrow a.doSomething()$

$a \rightarrow \{ a.doSomething(); \}$

Lambda Expression Structure

Always the **arrow**

`a → a.doSomething()`

`(type a) → { a.doSomething(); }`

Lambda Calculus

Parameter name

a \rightarrow a.doSomething()

(type **a**) \rightarrow { a.doSomething(); }

ORACLE
Developer
Champion

Lambda Expression Structure

Optional parameter type

`a —> a.doSomething()`

`(type a) —> { a.doSomething(); }`

Lambda Calculus

$a \rightarrow a.doSomething()$

$(type\ a) \rightarrow \{ a.doSomething(); \}$

Optional Parenthesis when have only **one** parameter **without** type
Required when have **two or more** parameters or **have** type

Lambda Expression Structure

Single statement

$a \rightarrow a.doSomething()$

$(type\ a) \rightarrow \{ a.doSomething(); \}$

• Lambda Calculus

$a \rightarrow a.doSomething()$

$(type\ a) \rightarrow \{ a.doSomething(); \}$

For more than one statement use **curly brackets** (a code block)

Lambda Expression Rules

`(int a, int b) -> { return a + b; }`

`(a, b) -> { return a + b; }`

`(a, b) -> a + b;`

`() -> System.out.println("Hello World");`

`(String s) -> { System.out.println(s); }`

`() -> 42`

`() -> { return 3.1415 };`

Lambda Expressions in Action

```
mHandler.postDelayed(new Runnable() {  
    @Override  
    public void run() {  
        goToLogin();  
    }  
}, 5000);
```

```
private Runnable stopAndGoToLogin = new Runnable() {  
    @Override  
    public void run() {  
        goToLogin();  
    }  
}
```

```
mHandler.postDelayed(stopAndGoToLogin, 5000);
```

```
private Runnable stopAndGoToLogin = new Runnable() {  
    @Override  
    public void run() {  
        goToLogin();  
    }  
}
```

```
private Runnable stopAndGoToLogin = () -> goToLogin();
```

```
mHandler.postDelayed(stopAndGoToLogin, 5000);
```

```
private Runnable stopAndGoToLogin = new Runnable() {  
    @Override  
    public void run() {  
        goToLogin();  
    }  
}
```

```
private Runnable stopAndGoToLogin = () -> goToLogin();
```

```
mHandler.postDelayed(() -> goToLogin(), 5000);
```

we can pass to have a crazy(verbosity) code to other more simple
verbosity -> simple

```
mHandler.postDelayed(new Runnable() {  
    @Override  
    public void run() {  
        goToLogin();  
    }  
}, 5000);
```

```
mHandler.postDelayed(() -> goToLogin(), 5000);
```

Understanding Lambda Expressions

How we can define
a Runnable?

Understanding Lambda Expressions

Runnable is an
Interface

• Functional Interface

Is any interface that contains only **one abstract method**.

```
java.lang.Runnable  
void run()
```

Basic Functional Interface

```
@FunctionalInterface  
public interface Check<T> {  
    boolean test(T a);  
}
```

Example

```
public class Animal {  
  
    private String specie;  
    private boolean canHop;  
    private boolean canSwim;  
  
    public Animal(String specieName, boolean hopper, boolean swimmer){  
        specie = specieName;  
        canHop = hopper;  
        canSwim = swimmer;  
    }  
  
    public boolean canHop(){  
        return canHop;  
    }  
  
    public boolean canSwim(){  
        return canSwim;  
    }  
  
    public String toString(){  
        return specie;  
    }  
}
```

Example

```
Check<Animal> checkHop = a -> a.canHop();  
print(animals, checkHop);
```

```
Check<Animal> checkSwim = a -> a.canSwim();  
print(animals, checkSwim);
```

```
private static void print(List<Animal> animals, Check checker) {  
    for (Animal animal : animals) {  
        if (checker.test(animal)) {  
            System.out.print(animal + " ");  
        }  
    }  
}
```

Android Fundamentals

- ~~Java language syntax~~ *Kotlin*
- ~~UI logic goes in the Activity~~ *View Models*
- ~~Services for background processing~~ *Job Scheduler*
- ~~Monitor system events with Receivers~~ *Job Scheduler*
- ~~Content Providers for database access~~ *Room database*
